

*Hi. I'm Andrew.
I need your help.*

I'm 15 years old and have survived cancer, had a heart transplant and have a rare autoimmune disease.

My medication makes me susceptible to complications, even death, if I'm around people with illnesses like measles & whooping cough.

Please have your child immunized – it protects your child, and people like me.

PARENTS: Just two free vaccines protect your child against whooping cough, polio, measles, mumps, rubella, chicken pox, tetanus, and diphtheria.

Recommended for children starting at age 4 – before entering kindergarten in the fall.

Book an appointment at your nearest community health centre.
